
EVA-625

Product Update: USB Flash Drive Option

Virtually Unlimited Data Storage

PMT remains committed to continuous improvement, and is pleased to announce the introduction of the **ESB-1 USB Flash Drive** option for the EVA-625 Elevator/Escalator Vibration Analysis System. This option provides virtually unlimited data storage of elevator/escalator motion, sound, tachometer and index data. It also eliminates the necessity of using legacy serial ports. Data transfer is as simple as removing a standard flash drive and plugging it into your PC USB port. The latest version of the EVA Elevator Analysis Tools software seamlessly handles and converts the stored data to standard EVA format data files.

Gigabyte Data Storage

Standard Flash Drives

Upgrade Your Existing EVA-625

Nearly Instantaneous Data Transfer

Serial Port (RS-232) Not Required

Upgrades for All

PMT has pledged to support our customers for the long term, and is therefore offering the **RSB-1** retrofit for **existing** EVA-625 instruments. This will bring all instruments up to the latest EVA functionality and ensure the long term value of your instrument.

For further information, or to schedule your upgrade, contact PMT or your authorized PMT distributor. (Again, you will be amazed!)
